

IN THE CLAIMS:

Please revise the set of pending claims as set forth herein.

1. (Currently Amended) A method for forming a device isolation film, comprising the steps of:
 - (a) sequentially forming a pad oxide film and a pad nitride film on a semiconductor substrate;
 - (b) selectively etching the pad nitride film to form a nitride film pattern;
 - (c) etching the pad oxide film and a predetermined thickness of the semiconductor substrate using the nitride film pattern as a hard mask to form a trench;
 - (d) forming a thermal oxide film on the surface of the trench;
 - (e) performing an annealing process under NH₃ atmosphere to form an oxide nitride film on the surface of the thermal oxide film;
 - (f) forming a liner nitride film on the entire surface oxide nitride film and the pad nitride film to improve interface characteristic between the thermal oxide film and said liner nitride film;
 - (g) forming an oxide film filling the trench on the entire surface; and
 - (h) performing a planarization process.
2. (Original) The method according to claim 1, wherein the step (e) comprises a plasma NH₃ nitridation or a thermal NH₃ nitridation.

Serial No.: 10/600,332
Atty. Docket No.: P68917US0

3. (Original) The method according to claim 1, wherein the step (e) is performed at a temperature ranging from 600 to 900°C.

4. (Original) The method according to claim 1, wherein the step (e) is performed at a pressure ranging from 5 mTorr to 200 Torr.

5. (Original) The method according to claim 1, wherein the steps (e) and (f) are performed under in-situ, in-chamber or cluster condition.

6. (Original) The method according to claim 1, wherein the step (f) is performed in a LPCVD furnace or a LPCVD single chamber.

7. (Original) The method according to claim 6, wherein the step (f) is performed at a temperature ranging from 600 to 900°C.

8. (Original) The method according to claim 6, wherein the step (f) is performed at a pressure ranging from 0.1 to 10 Torr.

9. (Original) The method according to claim 6, wherein the step (f) is performed using one or more gases selected from the group consisting of SiH₄, SiC₁₄ and SiH₂C₁₂ as silicon

Serial No.: 10/600,332
Atty. Docket No.: P68917US0

source gases, and using one or more gases selected from the group consisting of NH₃ and N₂ as nitrogen source gases.

10. (Original) The method according to claim 9, wherein the supply ratio of nitrogen source gas to silicon source gas is 1 : 1 ~ 20 : 1.

11. (Currently Amended) The method according to claim 1, wherein the step (f) further comprises the step of forming said a thermal oxide film on a said liner nitride film and performing an additional annealing process.

12. (Canceled).
